Technology

Further enhancing the proven technology used in Ultraframe's Classic roof, the new Ultraframe Classic Aluminium suite combines state-of-the-art ideas and design technologies with elegant, contemporary profiles to provide a strong, rigid yet lightweight system that can be configured into virtually any roof design.

Base Offer

- Aluminium glazing bar top caps.
- Aluminium ridge body and aluminium low profile crestring.
- Aluminium cast ridge end, integral brush and weathering flashing (or downgrade to PVC radius end).
- Aluminium vent available

Upgrade Options

- Aluminium decorative Cornice.
- Aluminium ball finial.
- Aluminium crestring.
- Aluminium muntin.*
- Aluminium glazing end profile.*
- Cornice die cast aluminium corner cover in 135° and 90° angles.

*When Cornice is specified, these items are supplied in grey RAL 7016. This applies also to glazing bar end caps.

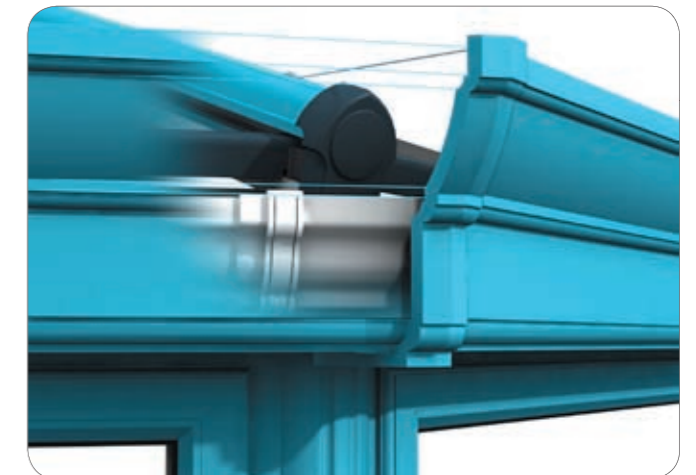

TOP CAP CLIPS

The Ultraframe Classic aluminium roof also takes a different approach to top cap retention. To ensure that there is a constant thermal break and that no fixings puncture the primary weatherproofing, Ultraframe has developed a new patented device which is simply 'zipped' into the head of the aluminium bar whilst the roof is being built. These spring clip security devices are then deployed at 500mm centres on site, nipped into final position before – with no more than the heel of the hand – the top cap is finally secured.

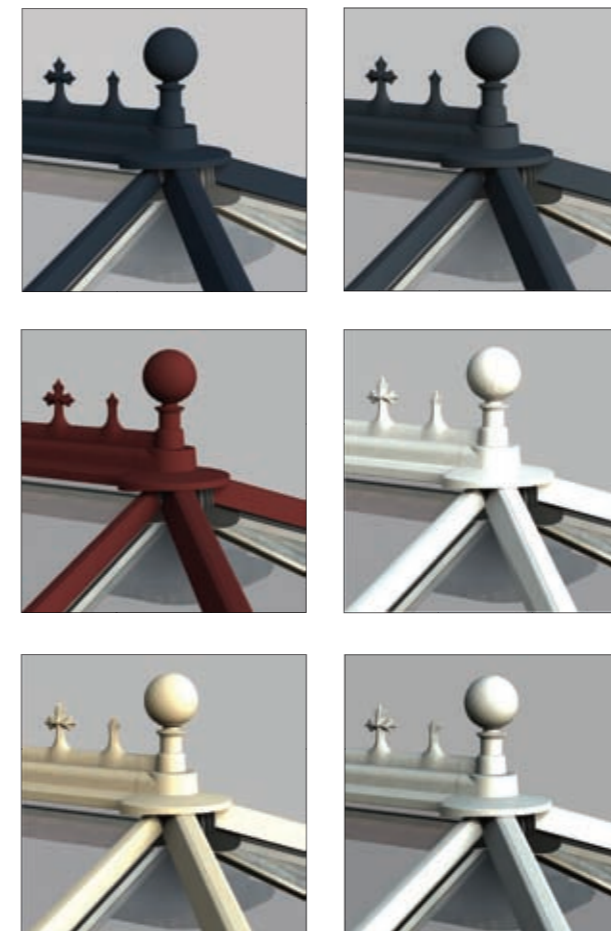

CORNICE

The Ultraframe Classic Aluminium suite is the only aluminium suite on the market which offers a decorative aluminium Cornice option using the existing gutter as a hidden 'liner'. Further enhancements to Cornice include a die cast 135 and 90 degree corner cover, which will help fitters achieve a consistent fit and finish at critical junctions.

COLOUR OPTIONS

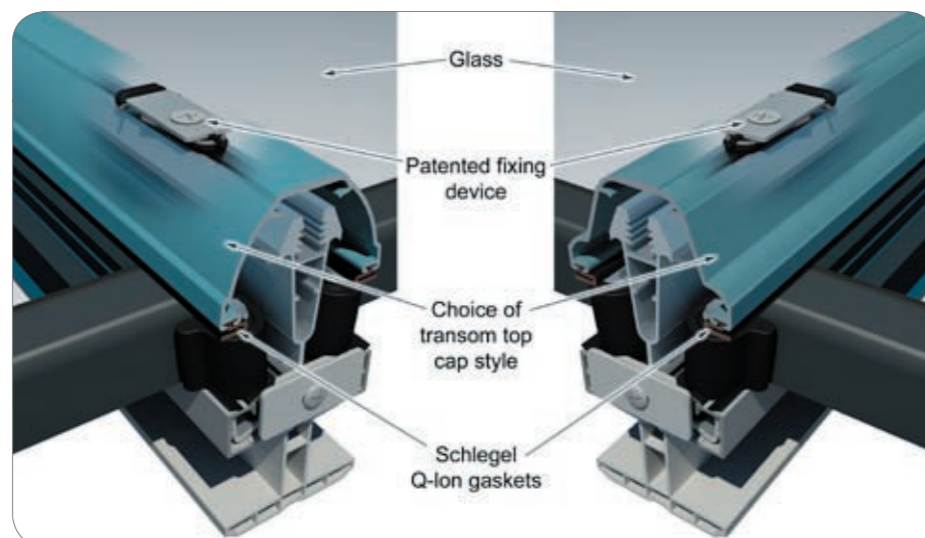

The Ultraframe Classic aluminium roof is available painted in a wide range of RAL specified colours. Choose a traditional white colour or break the mould with a contemporary grey or black roof. Virtually any other colour you can imagine can be matched using the RAL colour system.

TRANSOM TOP CAPS

When selling the Ultraframe Classic aluminium roof, retailers have the choice between two different shaped transom top caps; a contemporary and a traditional option.

All Ultraframe top caps in the range utilise innovative Schlegel Q-Ion gaskets which are inserted into the glazing bar top cap slots. Due to their unique design shape, when under compression, these gaskets create a double weatherseal, remaining operational and elastic even in the worst of weather conditions, without any loss in seal.
